Why a beat on EPS did not lift the stock

Supportive

- Adjusted EPS $3.22 (+21.5%), in the top half of the $3.15–3.25 guide; GAAP EPS $2.42 (+34%).
- Defense-heavy PPS sales $104M, +21%.
- NIS (data-centre and telecom power) $449M, +3%.
- Ultralife acquisition† adds defense and specialty batteries.

What weighed on it

- Net sales $949.9M, −0.1% y/y and below the $955–995M guide (FX cited).
- IRC 45X manufacturing credits were $44.4M; without them and tariff refunds, adjusted EPS is about $2.06†.
- Q3 guide: adjusted EPS $3.05–3.15, below the Q2 print.
- 45X credits depend on US policy; a valuation built on reported EPS over-weights them.

AUTOMATIC LABEL	OPPORTUNITY SCORE	BUY UP TO	LAST CLOSE
Buy	7.34	$203.69	$143.00

The price is 30% below the Buy-up-to, so price is not the risk to the label. The question is quality of earnings: if the valuation input treats 45X credits as recurring, the P/E looks cheaper than the business is. A low P/E alone is not enough for a Buy; flat sales and a lower Q3 guide make a score drift down more likely than up.
